## Tictac Math

All rows, columns, and three numeral diagonals must add up to the same sum. Write the total and then fill in the empty spaces.

Problem 1

Total: $\qquad$

Total: $\qquad$

Problem 2

Total: $\qquad$

Problem 4

Problem 2: ? = 10
Explanation: Remove $\square$ from both sides on 2nd balance so $\bigcirc=15$. Substitute 15 for each $\bigcirc$ on 1st balance so $15+15=30=$ nsen Divide both sides in thirds so $10=\boldsymbol{N}$.

Problem 1: ? = 75
Explanation: Remove $\searrow$ from both sides on 2nd balance so $\bigcirc=\searrow \square$. Substitute $\bigcirc$ for $\diamond \square$ on 1st balance so $100=\bigcirc \bigcirc$ Divide in fourths, $=25$. Divide both sides in half on 1st balance so $50=\searrow \square . \square \square=25+50=75$.

Problem 2: ? = 750
Explanation: Remove ${ }^{\text {O }}$ + 10 from both sides on 2nd balance so =15. Substitute 15 for on 1st balance so $\oslash=500$. Divide in half so $\oslash=250$.
$\oslash \oslash=500+250=750$.

Problem 1: ? = 72
Explanation: Remove $\AA$ from both sides on 1st balance so $\searrow$ D Double both sides on 2nd balance so $\bigcirc=32$. Substitute 32 for $\bigcirc$ on 1st balance so sides in fourths so $=24$.

Problem 2: ? = 12
Explanation: Divide both sides on 1st balance in half so $\Delta=$. Substitute 0 for each $\Delta$ on 2nd balance so $\bigcirc=12+\bigcirc$ Remove
from sides so $\bigcirc=12$.

Problem 1: ? = 24
Explanation: Remove 3 from both sides and divide in fourths on 1st balance so $9=\boldsymbol{L}$. Substitute 9 for $\Delta$ on 2 nd balance so $\rangle+7=9+1=10$. Remove 7 from both sides so $\rangle=3 . \square=\rangle+24$.

Problem 2: ? = 100
Explanation: Divide both sides on 2nd balance in fifths so $=8$. Substitute 8 for each on 1st balance so $\square \Delta=48$. Divide into thirds so $\Delta=$ 16. So $\square \square=32+16=48 . \square \square+52=100$.
